Biomarkers in Atopic Dermatitis and Psoriasis

What is BioMAP?

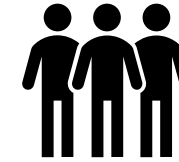

Alexandra Hicks

Sanofi

Biomarkers in Atopic Dermatitis and Psoriasis (BioMAP)

BioMAP is a large collaborative partnership is to identify new biomarkers or “biological fingerprints” that can be used to better understand skin diseases and lead to the development of new treatments

- 39 partners (academia, biopharmaceutical companies and patient organizations)

- 10,000 people with eczema
- 7,500 people with psoriasis
- 21,000 people without skin diseases

- 72 months
- 22 million €

Via large scale integration of patient samples and data, the BioMAP project is driving increased understanding of skin diseases and the development of new treatments
